

## Additional information to **4CA034**

The perennial, emergent floodplain wetland, as mentioned under wetland types, should be replaced with type **Tp**, permanent freshwater marshes. (type P is for lakes)

Criteria: 1a, 1c, 2a, 2b

Justification of criterion 2a:

The site hosts two globally threatened turtle species, spotted turtle *Clemmys guttata* and wood turtle *Clemmys insculpta*, and one near-threatened turtle species, Blanding's turtle *Emydoidea blandingii*. (taken from 1996 IUCN Red List of Threatened Species).

Criterion 2d is mentioned on the official sheet indicating the wetland types (in the site file). However, no indication of any endemic plant or animal species has been given, therefore it has been removed from the database.

The site falls under IUCN category V.
