

Ramsar Information Sheet

India Nandur Madhameshwar

Designation date 21 June 2019 Site number 2410 Coordinates 20°01'18"N 74°06'24"E Area 1 437,00 ha

https://rsis.ramsar.org/ris/2410 Created by RSIS V.1.6 on - 1 February 2020

Color codes

Fields back-shaded in light blue relate to data and information required only for RIS updates.

Note that some fields concerning aspects of Part 3, the Ecological Character Description of the RIS (tinted in purple), are not expected to be completed as part of a standard RIS, but are included for completeness so as to provide the requested consistency between the RIS and the format of a 'full' Ecological Character Description, as adopted in Resolution X.15 (2008). If a Contracting Party does have information available that is relevant to these fields (for example from a national format Ecological Character Description) it may, if it wishes to, include information in these additional fields.

1 - Summary

Summary

Nandur Madhameshwar, located 40 km away from Nashik town (Maharastra) and at the confluence of Godavari and Kadawa River, is a mosaic of marshes, intermittent pools and riparian forests. Juxtaposed to the rain shadow semi-arid area of Western Ghats within the Deccan Plateau, the wetland has a species assemblage representing both of these biogeographic zones. Recorded species richness here includes at least 536 species of aquatic and terrestrial plants, eight species of mammals, 265 species of birds, 24 species of freshwater fishes and 41 species of butterflies. Of the recorded birds, 148 inhabiting the wetland are migratory. Nandur-Madheshwar teems with waterbirds in winter, where their numbers invariably exceed 20,000 individuals. The wetland serves as a habitat for a number of species of high global conservation significance, including one globally vulnerable plant species (Indian sandalwood), two critically endangered birds (white-rumped vulture and Indian vulture), one endangered bird (Egyptian vulture), one critically endangered fish (Deolali minnow) and one vulnerable mammal (leopard). The wetland has been designated as Nandur Madhameshwar Wildlife Sanctuary (NMWLS) for protecting, propagating and developing wildlife therein. The wetland is a critical water resource for humans as well as numerous animal and plant species, which depend on its habitat for sustenance. It is also a popular tourism destination, especially for nature-lovers and bird-watchers.

2 - Data & location

- 2.1 Formal data
- 2.1.1 Name and address of the compiler of this RIS

Compiler 1

Name	Mr. Bharat Baburao Shinde
Institution/agency	Maharashtra Forest Department
Postal address	Office of Conservator of Forest (Wildlife), Nashik Aranya Sankul, Old Agra Road, Trambak Naka, Nashik PIN Code: 422002
E-mail	acfnmsnashik@gmail.com
Phone	+91 0253 5205114
Fax	+91 0253 5205115

2.1.2 - Period of collection of data and information used to compile the RIS

From year	2013
To year	2017

2.1.3 - Name of the Ramsar Site

Official name (in English, French or Spanish) Nandur Madhameshwar

2.2 - Site location

2.2.1 - Defining the Site boundaries

b) Digital map/image

<2 file(s) uploaded>

Former maps 0

Boundaries description

Nandur Madhameshwar lies between 200 02' 34.05'' N (North), 740 08' 52.34''E (East) and 200 00' 08.57" N(South), 740 03' 31.38" E(West).

North-Boundaries of Kothure, Kurudgaon, Kathargaon and Dindori villages,

East- Boundaries of Dindori, Nandur Madhameshwar and Khangaon Thadi villages,

South-Boundaries of Khangaon Thadi, Manjargaon and Chapadgaon villages,

West-Boundaries of Karanjgaon, Shingve and Kothure villages of Niphad Taluka.

The wetland boundary coincides with the boundary of Nandur Madheshwar Wildlife Sanctuary.

2.2.2 - General location

a) In which large administrative region does the site lie? Maharashtra, India b) What is the nearest town or population centre? Niphad, Nashik

2.2.3 - For wetlands on national boundaries only

a) Does the wetland extend onto the territory of one or more other countries? Yes O No (

b) Is the site adjacent to another designated Ramsar Site on the territory of another Contracting Party?

2.2.4 - Area of the Site

Official area, in hectares (ha): 1437

Area, in hectares (ha) as calculated from GIS boundaries

2.2.5 - Biogeography Data & location, S2 - Page 1 Biogeographic regions

Regionalisation scheme(s)	Biogeographic region
Freshwater Ecoregions of the World (FEOW)	713:Northern Deccan Plateau
Other scheme (provide name below)	6 Deccan Peninsula Zone

Other biogeographic regionalisation scheme

Nandur Madhameshwar wetland falls under 6 Deccan Peninsula Zone as per Biogeographic Classification of India (Rodgers, Panwar and Mathur, 2002).

3 - Why is the Site important?

3.1 - Ramsar Criteria and their justification

<no data available>

Criterion 2 : Rare species and threatened ecological communities

Criterion 3 : Biological diversity

The wetland is rich in biodiversity, and has species assemblages representing the Western Ghats as well as the Deccan Plateau Biogeographic Zones of India. Till now 536 species of aquatic and terrestrial plants, eight species of mammals, 265 species of birds, 24 species of freshwater fishes, 41 species of butterflies have been recorded from the area. At least one species of plant, four species of birds and four species of fishes are endemic to India. Besides this, Nandur Madhameshwar wetland is utilized by wetland dependent species especially birds during migration season from October to March over the years. Out of 265 bird species which visit Nandur Madhameshwar wetland, 148 species are migratory.

Criterion 4 : Support during critical life cycle stage or in adverse conditions

Criterion 5 : >20,000 waterbirds

Overall waterbird numbers	35571 (2017)
Start year	2013
Source of data:	Annual Waterbird Count conducted at Nandur Madhameshwar Wildlife Sanctuary since 1987

Criterion 6 : >1% waterbird population

Criterion 7 : Significant and representative fish

Central Institute of Fisheries Education, Mumbai has recorded 24 fish species from ten families at Nandur Madhameshwar wetland. Being located at about 100 kms from origin of River Godavari at conjunction of Western Ghats and Deccan Peninsula Biogeographic Zones of India, the wetland has fish assemblage of both zones. All 24 species are native including four species namely, Ompok malabaricus, Parapsilorhynchus prateri and Rasbora labiosa endemic to Western Ghats whereas Salmophasia novacula are endemic to the Deccan Peninsula. Two globally threatened fish species found at Nandur Madhameshwar wetland, out of which Parapsilorhynchus prateri is Critically Endangered and currently known only from upper Godavari River basin up to Nandur Madhameshwar whereas Pethia shalynius is a vulnerable species. Of the 91 species from 23 families recorded by http://www.fishbase.org from Godavari river basin, Nandur Madhameshwar host 15 (16.48%) species from six (26.09%) families. Cypriniformes is a largest group accounting 45.83% followed by Perciformes (20.83%), Siluriformes (12.5%), Synbranchiformes (8.33%), Osteoglossiformes (8.33%) and Beloniformes (4.17%).

Criterion 8 : Fish spawning grounds, etc.

Nandur Madhameshwar Wetland is a water-spread area of Nandur Madhameshwar pick up weir and is connected outside by Godavari river and its tributaries at upstream and Godavari river and two canals at downstream. As fishing is prohibited at Nandur Madhameshwar, it acts as a refuge for fish from the outside areas with high pressure fishing activities. The wetland helps to protect fish species until they mature and reach breeding stage. The productive and shallow habitats resulted from continuous accumulation of silt are extensively used as feeding and spawning grounds and nurseries by fishes during rainy season. The occurrence of Ompok malabaricus, Parapsilorhynchus prateri and Rasbora labiosa are endemic to Western Ghats and other native fishes at Nandur Madhameshwar is proof that the Site is vital for food, spawning and migration path on which fish stocks, within and outside the sanctuary depends.

3.2 - Plant species whose presence relates to the international importance of the site

Scientific name	Common name	Criterion 2	Criterion 3	Criterion 4	IUCN Red List	CITES Appendix I	Other status	Justification

1) Percentage of the total biogeographic population at the site

3.4 - Ecological communities whose presence relates to the international importance of the site

<no data available>

4 - What is the Site like? (Ecological character description)

4.1 - Ecological character

Nandur Madhameshwar wetland is a mosaic of marshes, intermittent pools and riparian forests. The permanent freshwater lakes, marshes, pools and rivers are the major wetland habitat types, which support a variety of plant and animal communities. The wet meadows, seasonal/intermittent marshes, pools and steams form minor wetland types in which ecological communities from Riparian Forest and Vernal Pools survive. The exposed streambed below the weir contains small water ponds and mud flats, which are frequented by waders. During peak monsoon, the entire wetland barring the reserved forest area is inundated. The water gradually recedes during winter, exposing intermittent pools. The water level fluctuates by over half a meter during September - March due to periodic release of water from the weir, and water received from upstream dams. The wetland is also known for providing variety of ecosystem services like regulating services (recharging of ground water, climate regulation, safety from floods), supporting services (facilitating nutrient recycling, soil formation, providing habitat to flora and fauna) and cultural services (providing recreational and tourism opportunities, supporting spiritual and cultural practices, facilitating scientific research).

4.2 - What wetland type(s) are in the site?

Inland wetlands				
Wetland types (code and name)	Local name	Ranking of extent (1: greatest - 4: least)	Area (ha) of wetland type	Justification of Criterion 1
Fresh water > Flowing water >> M Permanent rivers/ streams/ creeks	Nadi Nala	3		
Fresh water > Lakes and pools >> O: Permanent freshwater lakes		1		
Fresh water > Lakes and pools >> P: Seasonal/ intermittent freshwater lakes		4		
Fresh water > Lakes and pools >> Tp: Permanent freshwater marshes/ pools		2		
Fresh water > Marshes on inorganic soils >> Ts: Seasonal/ intermittent freshwater marshes/ pools on inorganic soils		4		

Human-made wetlands

Wetland types (code and name)	Local name	Ranking of extent (1: greatest - 4: least)	Area (ha) of wetland type	Justification of Criterion 1
2: Ponds		2		
6: Water storage areas/Reservoirs		1		
9: Canals and drainage channels or ditches		4		

Other non-wetland habitat

Other non-wetland habitats within the site	Area (ha) if known
Reserved Forest	55.067

4.3 - Biological components

4.3.1 - Plant species

Invasive alien plant species

Scientific name	Common name	Impacts]
Agave americana	American Aloe	No impacts	No change
Ageratum conyzoides	Billy Goat Weed	No impacts	No change
Alternanthera philoxeroides	Alligator Weed	No impacts	No change
Cestrum nocturnum	Night Blooming Jasmine	No impacts	No change
Cryptostegia grandiflora	Rubber Vine	No impacts	No change
Cyperus rotundus	Nutgrass	No impacts	No change
Eichhornia crassipes	Water Hyacinth	No impacts	No change
Lantana camara	Big-sage	No impacts	No change
Leucaena leucocephala	Subabul	No impacts	No change
Parthenium hysterophorus	Congress Grass	No impacts	No change
Prosopis chilensis	Chilean mesquite	No impacts	No change
Ricinus communis	Castrobean	No impacts	No change
Vachellia farnesiana	Sweet Acacia	No impacts	No change

4.3.2 - Animal species

invasive alien animal species				
Phylum	Scientific name	Common name	Impacts	
CHORDATA/AVES	Acridotheres tristis	Common Myna	No impacts	No change
CHORDATA/AVES	Columba livia	Common Pigeon	No impacts	No change
CHORDATAAVES	Pycnonotus jocosus	Red-whiskered Bulbul	No impacts	No change

4.4 - Physical components

4.4.1 - Climate

Climatic region	Subregion
B: Dry climate	BSh: Subtropical steppe (Low-latitude dry)

The climate of the area is generally dry, except during South-West monsoon season. The maximum temperature in summer is 42.5 degree Celsius and minimum temperature in winter is less than 5.0 degree Celsius. The region receives around 750 mm of rainfall, most of which is concentrated during monsoon period.

4.4.2 - Geomorphic setting

Please name the river basin or basins. If the site lies in a sub-basin, please also name the larger river basin. For a coastal/marine site, please name the sea or ocean.

Basin - Godavari River Basin
Sub-basin - Upper Godavari River Basin

Mineral

Organic 🗹

No available information \Box

Are soil types subject to change as a result of changing hydrological conditions (e.g., increased salinity or acidification)? Yes O No (•)

4.4.4 - Water regime

Water permanence	
Presence?	
Usually permanent water present	No change

Presence?	Predominant water source	
Water inputs from rainfall	×	No change
Water inputs from surface water	X	No change

Water destination

Flesencer	
To downstream catchment	No change

Stability of water regime

Presence?	
Water levels largely stable	No change

Please add any comments on the water regime and its determinants (if relevant). Use this box to explain sites with complex hydrology.

The water level is largely stable with some fluctuations in the month of April and May, if water rotation from upstream dams is not on time and in the years of low rainfall.

4.4.5 - Sediment regime

Significant erosion of sediments occurs on the site \Box		
Significant accretion or deposition of sediments occurs on the site $\ensuremath{\mathbb{Z}}$		
Significant transportation of sediments occurs on or through the site $\ensuremath{\mathbb{Z}}$		
Sediment regime is highly variable, either seasonally or inter-annually 🖉		
Sediment regime unknown		

(ECD) Water turbidity and colour Turbidity of 2.47 Nephelometric Turbidity Units, Colour of 1 Hazen Unit (Source: Monthly Water Sample Results, 2015) (ECD) Water temperature Average 25 degree celsius

4.4.6 - Water pH

Acid (pH<5.5)
Circumneutral (pH: 5.5-7.4)
Alkaline (pH>7.4) 🗹
Unknown 🗆

Please provide further information on pH (optional):

4.4.8 - Dissolved or suspended nutrients in water

Mesotrophic 🗹
Oligotrophic
Dystrophic
Unknown 🗖

Please provide further information on dissolved or suspended nutrients (optional):

Although specific assessments on nutrients have not been carried out, algal blooms are noted when the water recedes during summer.

4.4.9 - Features of the surrounding area which may affect the Site

Please describe whether, and if so how, the landscape and ecological

characteristics in the area surrounding the Ramsar Site differ from the i) broadly similar O ii) significantly different O

site itself:

Surrounding area has greater urbanisation or development $\hfill\square$

Surrounding area has higher human population density \Box

Surrounding area has more intensive agricultural use

Surrounding area has significantly different land cover or habitat types \Box

4.5 - Ecosystem services

4.5.1 - Ecosystem services/benefits

Provisioning Services

Ecosystem service	Examples	Importance/Extent/Significance
Food for humans	Sustenance for humans (e.g., fish, molluscs, grains)	Low
Fresh water	Drinking water for humans and/or livestock	High
Fresh water	Water for irrigated agriculture	High

Regulating Services

Ecosystem service	Examples	Importance/Extent/Significance	
Maintenance of hydrological regimes	Groundwater recharge and discharge	Medium	
Maintenance of hydrological regimes	Storage and delivery of water as part of water supply systems for agriculture and industry	High	
Erosion protection	Soil, sediment and nutrient retention	Medium	
Climate regulation	Local climate regulation/buffering of change	Medium	
Biological control of pests and disease	Support of predators of agricultural pests (e.g., birds feeding on locusts)	High	
Hazard reduction	Flood control, flood storage	Medium	

Cultural Services

Ecosystem service	Examples	Importance/Extent/Significance
Recreation and tourism	Picnics, outings, touring	Medium
Recreation and tourism	Nature observation and nature-based tourism	High
Spiritual and inspirational	Cultural heritage (historical and archaeological)	Low
Spiritual and inspirational	Spiritual and religious values	Low
Spiritual and inspirational	Aesthetic and sense of place values	Medium
Scientific and educational	Educational activities and opportunities	Medium
Scientific and educational	Important knowledge systems, importance for research (scientific reference area or site)	Medium
Scientific and educational	Long-term monitoring site	Medium
Scientific and educational	Major scientific study site	Low

Supporting Services

Ecosystem service	Examples	Importance/Extent/Significance
Biodiversity	Supports a variety of all life forms including plants, animals and microorganizms, the genes they contain, and the ecosystems of which they form a part	High
Soil formation	Sediment retention	Medium
Soil formation	Accumulation of organic matter	High
Nutrient cycling	Storage, recycling, processing and acquisition of nutrients	Medium

 Within the site:
 0

 Outside the site:
 23800

Have studies or assessments been made of the economic valuation of ecosystem services provided by this Ramsar Site?

4.5.2 - Social and cultural values

i) the site provides a model of wetland wise use, demonstrating the application of traditional knowledge and methods of management and D use that maintain the ecological character of the wetland

ii) the site has exceptional cultural traditions or records of former civilizations that have influenced the ecological character of the wetland

iii) the ecological character of the wetland depends on its interaction with local communities or indigenous peoples

iv) relevant non-material values such as sacred sites are present and their existence is strongly linked with the maintenance of the ecological character of the wetland

<no data available>

4.6 - Ecological processes

<no data available>

5 - How is the Site managed? (Conservation and management)

5.1 - Land tenure and responsibilities (Managers)

5.1.1 - Land tenure/ownership

Public ownership						
Category	Within the Ramsar Site	In the surrounding area				
Provincial/region/state						

Private ownership

india of indiana						
Category	Within the Ramsar Site	In the surrounding area				
Other types of private/individual owner(s)	V	V				

Provide further information on the land tenure / ownership regime (optional):

Presently land within the Ramsar Site is held by three departments of State Government namely Irrigation Department, Revenue Department and Forest Department.

An area of around 10 ha of the wetland is under private ownership. The surrounding area is entirely under private ownership.

5.1.2 - Management authority

Please list the local office / offices of any agency or organization responsible for managing the site:	Office of Conservator of Forests (Wildlife), Nashik
Provide the name and title of the person or people with responsibility for the wetland:	Mr. Bharat Baburao Shinde, Assistant Conservator of Forests, Nandur Madhameshwar Wildlife Sanctuary.
Postal address:	Office of Conservator of Forest (Wildlife), Nashik Aranya Sankul, Old Agra Road, Trambak Naka, Nashik PIN Code: 422002
E-mail address:	cfwlnashik@mahaforest.gov.in

5.2 - Ecological character threats and responses (Management)

5.2.1 - Factors (actual or likely) adversely affecting the Site's ecological character

Invasive and other problematic species and genes

Factors adversely affecting site	Actual threat	Potential threat	Within the site	In the surrounding area
Introduced genetic material	Low impact	unknown impact	×	
Invasive non-native/ alien species	Medium impact	unknown impact	×	V

Pollution

Factors adversely affecting site	Actual threat	Potential threat	Within the site	In the surrounding area
Household sewage, urban waste water	Medium impact	unknown impact	×	V
Industrial and military effluents	Medium impact	unknown impact	×	V
Agricultural and forestry effluents	Medium impact	unknown impact	×	V

Climate change and severe weather

Factors adversely affecting site	Actual threat	Potential threat	Within the site	In the surrounding area
Droughts	Low impact	unknown impact	×	
Temperature extremes	Low impact	unknown impact	×	×
Habitat shifting and alteration	Low impact	unknown impact	×	V
Storms and flooding	Medium impact	unknown impact	×	V

5.2.2 - Legal conservation status

National legal designations				
Designation type	Name of area	Online information url	Overlap with Ramsar Site	
Wildlife Sanctuary	Nandur Madhameshwar Wildlife Sanctuary	http://www.mahaforest.nic.in/san ctuary_detail.php?lang_eng_mar=M ar&sat_id=21&sid=33	whole	

Non-statutory designations			
Designation type	Name of area	Online information url	Overlap with Ramsar Site
Important Bird Area	IN164	http://datazone.birdlife.org/sit e/factsheet/nandur-madhmeshwar-w ildlife-sanctuary-iba-india	partly

5.2.3 - IUCN protected areas categories (2008)

la Strict Nature Reserve

- Ib Wilderness Area: protected area managed mainly for wilderness protection
 - Il National Park: protected area managed mainly for ecosystem protection and recreation
- III Natural Monument: protected area managed mainly for conservation of specific natural features
- IV Habitat/Species Management Area: protected area managed mainly for conservation through management intervention

VProtected Landscape/Seascape: protected area managed mainly for landscape/seascape conservation and recreation

VI Managed Resource Protected Area: protected area managed mainly for the sustainable use of natural ecosystems

5.2.4 - Key conservation measures

Legal protection

Measures	Status	
Legal protection	Implemented	

Habitat

Measures	Status
Catchment management initiatives/controls	Implemented
Improvement of water quality	Partially implemented
Habitat manipulation/enhancement	Partially implemented
Hydrology management/restoration	Partially implemented
Soil management	Proposed
Land conversion controls	Proposed
Faunal corridors/passage	Proposed

Species

Measures	Status
Control of invasive alien plants	Partially implemented

Human Activities

Measures		Status	
	Management of water abstraction/takes	Partially implemented	
	Regulation/management of wastes	Partially implemented	
	Livestock management/exclusion (excluding fisheries)	Proposed	
	Regulation/management of recreational activities	Partially implemented	
	Communication, education, and participation and awareness activities	Partially implemented	
	Research	Partially implemented	
	Fisheries management/regulation	Partially implemented	
	Harvest controls/poaching enforcement	Implemented	

5.2.5 - Management planning

Is there a site-specific management plan for the site? Yes

Has a management effectiveness assessment been undertaken for the site? Yes
No O

If the site is a formal transboundary site as indicated in section Data and location > Site location, are there shared management planning Yes O No processes with another Contracting Party?

URL of site-related webpage (if relevant): http://www.mahaforest.nic.in/sanctuary_detail.php?lang_eng_mar=Mar&sat_id=21&sid=33

5.2.6 - Planning for restoration

Is there a site-specific restoration plan? No, but restoration is needed

Further information

Silt management and control of invasive species spread needs to be addressed to ensure that maintenance of wetland ecological character.

5.2.7 - Monitoring implemented or proposed

Monitoring	Status
Water quality	Proposed
Plant community	Proposed
Plant species	Proposed
Animal community	Proposed
Birds	Implemented
Animal species (please specify)	Implemented
Water regime monitoring	Proposed
