Information Sheet on Ramsar Wetlands

Categories approved by Recommendation 4.7 of the Conference of the Contracting Parties.

1. Date this sheet was completed/updated: 12-09-2002 2. Country: the Netherlands 3. Name of wetland: IJmeer 4. Geographical coordinates: \$1°21°N - 05°04°E 5. Altitude: (average and/or max. & min) NAP - 8 - 1 m 6. Area: (in hectares) 7,400 7. Overview: (general summary, in two or three sentences, of the wetland's principal characteristics) A stagnant freshwater lake, together with lake Markermeer, separated from Lake IJsselmeer by the closing of the Houtribdijk in 1975, in the east bordered by the reclaimed polders Oostelijk and Zuidelijk Flevoland (1957, 1968). The water level is kept higher during summer then in winter to provide water forarming. The lake is connected to lake Gooimeer in the southeast. In the east it is adjacent to the reclaimed polder Zuidelijk Flevoland. 8. Wetland Type (please circle the applicable codes for wetland types as listed in Annex I of the Explanatory Note and Guidelines document.) marine-coastal: A · B · C · D · E · F · G · H · I · J · K inland: L · M · N · O · P · Q · R · Sp · Ss · Tp · Ts · U · Va · Vt · W · Xf · Xp · Y · Zg · Zk man-made: 1 · 2 · 3 · 4 · 5 · 6 · 7 · 8 · 9 Please now rank these wetland types by listing them from the most to the least dominant: O 9. Ramsar Criteria: (please circle the applicable enteria; see point 12, next page.) 1 · 2 · 3 · 4 · 5 · 6 · 7 · 8 Please specify the most significant criterion applicable to the site: 6 10. Map of site included? Please tick yes T · or · no □ (Please refer to the Explanatory Note and Guidelines document for information regarding desirable map traits). 11. Criterion 6, Average peak numbers of species meeting the 1% threshold (1992/93-1997/98):

Species	Biogeographical population	1% Biogeogr. Population	% at site
Aythya ferina	NW-/ NE-Europe	3500	1,1%
Athya fuligula	NW-Europe	10000	2,0%

13. General location: (include the nearest large town and its administrative region)

Provinces of Flevoland and Noord-Holland, west of Almere, east of Amsterdam.

14. Physical features: (e.g. geology, geomorphology; origins - natural or artificial; hydrology; soil type; water quality; water depth water permanence; fluctuations in water level; tidal variations; catchment area; downstream area; climate)

Lake Markermeer and Lake IJmeer were cut off from lake IJsselmeer by the Houtribdijk in 1975. This dike was built for the purpose of land reclamation. This plan has never been carried out. Lake IJmeer together with Lake Markermeer is a stagnant freshwater lake. The average depth is 3,9 meters, but in sand extraction areas the depth can be over 30 meters. For agricultural purposes the water level is high in summer (NAP - 0,20) and low in winter (NAP - 0,40 m). Water is supplied by several sources: rain, flow from the lakes Gooimeer and Eemmeer, water inlet for the lake IJsselmeer, discharge water from the provinces Flevoland and North-Holland and by the river Vecht. The soil mainly consists of clay. The lake shores concern mainly basalt dikes without vegetation.

15. Hydrological values: (groundwater recharge, flood control, sediment trapping, shoreline stabilisation etc)

The surrounding polders (located below sea level) drain into the IJmeer and Markermeer which are discharged into the North Sea Channel (to the North Sea) or to lake IJsselmeer.

16. Ecological features: (main habitats and vegetation types)

Permanent freshwater lakes 98%.

17. Noteworthy flora: (indicating, e.g., which species/communities are unique, rare, endangered or biogeographically important, etc)

Plant communities of European interest: Nitellopsidetum obtusae; Charetum hispidae; Charetum asperae; Ranunculo fluitantis-Potametum perfoliati; Potametum lucentis;

Stoneworth species on the Red List: Chara contraria;

Mushroom species on the Red List: *Tricholoma fulvum*;

Vascular plants on the Red List: Parsley Water-dropwort *Oenanthe lachenalii*.

18. Noteworthy fauna: (indicating, e.g., which species are unique, rare, endangered, abundant or biogeographically important; include count data, etc.)

Note: Species included on Annex II of the EC Habitats Directive and bird species listed on Annex I of the EC Birds Directive have been indicated with an asterisk. In addition to those waterbirds listed under point 12, all waterbirds are mentioned occurring in numbers between 0,1 and 1,0% of their respective biogeographical populations Other non-waterbird species are included on the national Red List for the species group concerned.

Freshwater molluscs: *Theodoxus fluviatilis*; *Anisus vorticulus*; *Pisidium amnicum*; *Pisidium hibernicum*; Freshwater fishes: *River Lampetra fluviatilis; *Spined Loach *Cobitis taenia*; *Bullhead *Cottus gobio*; Orfe *Leuciscus idus*;

Birds (non-breeding): Great Crested Grebe *Podiceps cristatus*, Great Cormorant *Phalacrocorax carbo*, *Eurasian Spoonbill *Platalea leucorodia*, Mute Swan *Cygnus olor*, Greylag Goose *Anser anser*, *Barnacle Goose *Branta leucopsis*, Eurasian Wigeon *Anas [Mareca] penelope*, Gadwall *Anas strepera*, Common Pochard *Aythya ferina*, Tufted Duck *Aythya fuligula*, Greater Scaup *Aythya marila*, Common Goldeneye *Bucephala clangula*, *Smew *Mergus albellus*, Common Coot *Fulica atra*, *Black Tern *Chlidonias niger*; Mammals: *Pond bat *Myotis dasycneme*.

19. Social and cultural values: (e.g. fisheries production, forestry, religious importance, archaeological site etc.)

See 21. Current land use.

20. Land tenure/ownership of: (a) site (b) surrounding area

Small part of the site is owned by Natuurmonumenten (71 ha) and Staatsbosbeheer (9 ha), the water is state owned.

Surrounding area: the water (Markermeer, Gooimeer) is state owned, on land several private owners.

21. Current land use: (a) site (b) surroundings/catchment

Boating 100%, Tourism and leisure 5%, Extractive operations 20%, Commercial fisheries 90%, Shipping

traffic 20%, Conservation and research 1%, Water management 100%. Surroundings/ catchment: –

22. Factors (past, present or potential) adversely affecting the site's ecological character, including changes in land use and development projects: (a) at the site (b) around the site

Site (A = serious threat covering large part of the area; B = moderate threat or local threat; C = minor threat): Aquaculture/ fisheries (A -); Aquaculture/ fisheries (B - entanglement in fish nets); Extraction industry (mining) (C - sand); Industrialization and urbanization (C - wind turbines and several building plans); Infrastructure (C - commuter transport); Recreation/ tourism (B - pleasure navigation and increase of cycle paths); Pollution (not Industrial discharge) (A - eutrophication), Reclamation of 450 ha east of Amsterdam (IJburg) for building houses.

Around the site: -

23. Conservation measures taken: (national category and legal status of protected areas - including any boundary changes which have been made: management practices; whether an officially approved management plan exists and whether it has been implemented)

Special Protection Area (Birds Directive 79/409/EEC, 2000, 7400 ha), Wetland of International Importance (2/4/2000, 7400 ha). Management plans: Ministerie VW, LNV, VROM. 1992. Integraal Beheersplan IJsselmeer en Markermeer. Ministerie VW, Lelystad; Ent L.J. van der, Bakker N.J. 1993. Beheersplan Eemmeer, Gooimeer en IJmeer 1994-2004. Buro Bakker, Assen.

24. Conservation measures proposed but not yet implemented: (e.g. management plan in preparation; officially proposed as a protected area etc.)

Construction of islets and foreshores to create breeding and feeding areas for birds and spawning grounds for fish.

25. Current scientific research and facilities: (e.g. details of current projects; existence of field station etc.)

Most research and monitoring is carried out by the Institute for Inland Water Management and Waste Water Treatment (RIZA, www.riza.nl) of the Ministry of Transport, Public works and Watermanagement. The research is organised in four topics: Wetland development and restoration: research and advice on the restoration of wetlands to their natural state; Water systems: research and advice on the integrated management of inland waters; Water pollution control: research and advice on waste water treatment and emission levels; Information and measurement technology: collection and processing of data and research in specialist laboratories. Relevant research is also carried out the Institute for River Research, which is part of the Institute for Hydrolic Engineering (IHE, www.ihe.nl) in Delft, and focuses mainly on floodplain research. The Center for Limnology (NIOO-CL, www.nioo.nl) in Nieuwersluis studies plant-bird interactions in several large freshwater lakes as part of general limnological research programmes. Also regular bird counts.

26. Current conservation education: (e.g. visitors centre, hides, information booklet, facilities for school visits etc.)

27. Current recreation and tourism: (state if wetland is used for recreation/tourism; indicate type and frequency/intensity) See 21. Current land use. Number of visitors not known, boating c. 1700 landing places.

28. Jurisdiction: (territorial e.g. state/region <u>and</u> functional e.g. Dept of Agriculture/Dept. of Environment etc.)
Territorial: Municipalities of Almere, Muiden, Diemen, Amsterdam, Waterland; Functional jurisdiction (conservation purposes): Ministerie van Landbouw, Natuurbeheer en Visserij. Waterstaat).

29. Management authority: (name and address of local body directly responsible for managing the wetland)
Rijkswaterstaat (Ministerie van Verkeer en Waterstaat), Directie IJsselmeergebied, PO Box 600, 8200 AP
Lelystad, the Netherlands, +31 320 299111
